

```
Windows PowerShell
default: this with a newly generated keypair for better security.
default: Inserting generated public key within guest...
default: Removing insecure key from the guest if it's present...
default: Key inserted! Disconnecting and reconnecting using new SSH key...
==> default: Machine booted and ready!
==> default: Checking for guest additions in VM...
default: The guest additions on this VM do not match the installed version of
default: VirtualBox! In most cases this is fine, but in rare cases it can
default: prevent things such as shared folders from working properly. If you see
default: shared folder errors, please make sure the guest additions within the
default: virtual machine match the version of VirtualBox you have installed on
default: your host and reload your VM.
default: Guest Additions Version: 6.1.50
default: VirtualBox Version: 7.1
==> default: Mounting shared folders...
default: C:/dev/aula2 => /vagrant
==> default: Running provisioner: ansible_local...
default: Installing Ansible...
default: Running ansible-playbook...
